

Georgios Zareifhs

Front-End Developer Patras, Greece | +30 6906064390

GitHub: github.com/geozar26 | **Email:** giorgoszar67@gmail.com

Professional summary

Front-End Developer based in Patras, specializing in building modern, responsive user interfaces. Leveraging a strong technical background in Information Technology and hands-on development experience, I focus on writing clean, maintainable code to deliver high-quality **UI/UX** solutions. Proven ability to integrate third-party APIs and manage complex client-side state.

Information Technology Intern | IEK VERGI, Patras

October 2021 – April 2022

- Provided comprehensive technical support and troubleshooting for software, hardware, and OS-related issues.
- Monitored and maintained network infrastructure to ensure maximum uptime and connectivity.
- Configured and managed peripheral devices and IT inventory, optimizing equipment performance for the institution.

Education

Diploma in Computer Applications ,Web Design & Development IEK VERGI, Patras (Technical Vocational Institute)

Technical Skills

- **Languages & Frameworks:** HTML5, CSS3 JavaScript (ES6+), **React.js**, jQuery.
- **Tools & Version Control:** **Git**, GitHub, Chrome DevTools.
- **Web Technologies:** REST APIs Integration, Asynchronous Programming (Async/Await), Browser Storage APIs (LocalStorage, Cookies, IndexedDB), Responsive Design.

Projects (Portfolio)

Restaurant Business Website (Demo Project)

- **Architecture & SEO:** using semantic HTML5 and **CSS3** with a Mobile-First responsive design approach. Optimized for Core Web Vitals using **Next-Gen image formats (WebP)** and lazy-loading techniques.

- **State Management & Auth:** Built a custom authentication flow utilizing **Browser Storage APIs (LocalStorage & Cookies)** to manage persistent user sessions and "Remember Me" functionality.
- **Custom UI Engine:** Engineered a high-performance **Touch-enabled Image Carousel** with custom swipe logic and a dynamic **Modal/Tooltip system** using Vanilla JavaScript to eliminate external library overhead.
- **Performance & Animations:** Leveraged `requestAnimationFrame` for high-performance UI transitions and implemented efficient DOM event delegation to minimize main-thread workload, consistently achieving a **jank-free 60fps user experience**.
- **Modern CSS:** Utilized CSS Grid, Flexbox, and **Custom Properties (Variables)** for a maintainable and scalable design system.

Music Streaming Web Application (React Project)

- **Custom Audio Engine:** Engineered a fully functional media player leveraging the **HTML5 Audio API** and **React hooks (useRef, useEffect)**. Implemented core features including a seekable progress bar, dynamic playback speed adjustments, and automated "next-track" sequencing logic.
- **Frontend Development:** Developed a modern, responsive web application using **React.js** and **Tailwind CSS**, featuring a sleek, mobile-optimized dark-themed user interface.
- **API Integration:** Integrated the **Deezer API** via **Axios** to enable real-time music search and "Trending" track discovery, efficiently managing asynchronous data fetching and secure API headers.
- **State Management & Persistence:** Leveraged React hooks for global application state and implemented client-side data persistence for a "Favorites" library and search history using **LocalStorage**.
- **User Experience (UX):** Enhanced user engagement with dynamic search suggestions, seamless track management (CRUD operations on library), and a smooth navigation system between views.

Weather Application (React & OpenWeather API)

- **Frontend Development:** Developed a dynamic weather application using **React functional components** and hooks (`useState`, `useEffect`, `useRef`) for real-time state management.
- **Data Integration:** Integrated the **OpenWeatherMap API** to fetch current weather metrics and a **5-day forecast**, implementing asynchronous data handling with the Fetch API and robust error management.
- **Advanced Text Processing:** Developed a custom **string normalization algorithm** to handle Greek characters, automatically removing accents (diacritics) and formatting input for reliable API queries.
- **Dynamic UI/UX:** Implemented a **context-aware styling system** that changes the application's background gradient based on real-time weather conditions (e.g., Clear, Rain, Snow).

- **Persistence & Localization:** Engineered a **search history system** utilizing **LocalStorage** for data persistence and implemented complex timezone calculations to display accurate local time for any searched city.

Infinite Scroll Image Gallery (jQuery & Unsplash API)

- **Frontend Development:** Built a high-performance Single Page Application (SPA) using **jQuery** and **Asynchronous JavaScript (AJAX)** to fetch and display high-resolution images from the **Unsplash API**.
- **Infinite Scroll Implementation:** Engineered a seamless infinite scroll mechanism using window scroll event listeners and dynamic threshold calculations to trigger automated data fetching.
- **State Management & Persistence:** Developed a localized "Favorites" system utilizing **LocalStorage** to persist user-selected images, including real-time UI updates when adding or removing items.
- **Custom Interactive UI:** Designed a responsive, mobile-first gallery using **Flexbox** and **Media Queries**, featuring a custom-built **Lightbox viewer** with fade-in/out animations for full-screen image previews.
- **Optimization & UX:** Implemented dynamic loading indicators (loaders), an intelligent search history reset (Back to Home logic), and optimized event delegation for handling interactions on dynamically rendered elements
